July 2017

Volume 15 Number 5

Since the founding of the International Pharmaceutical Excipients Council (IPEC-Americas) in 1991, the group has worked to facilitate the approval of new, innovative excipients outside of an approved new drug application. Now, thanks to its partnership with IQ Consortium and the support of the FDA, IPEC-Americas is closer to that goal. For details about their progress, please see the "Back Page" article by David Schoneker and Nigel Langley on page 44. It's good news for patients, formulators, and excipient manufacturers.

excipients & formulation

- An introduction to self-emulsifying nutraceutical delivery systems (SENDS)** **11**
John K. Tillotson
- Control strategy considerations during formulation and process development** **18**
Robert J. Timko
- A novel MCC for reducing segregation in direct-to-press blends** **24**
Yosuke Honda, Syozo Kaneyama, and Stephen Turner
- Issue focus: Excipients & formulation** **27**
- Gemini favors plant-based excipients to propagate clean-label supplements** **30**

mixers & blenders

- Mixers and blenders: A survey of what's available** **33**

tooling

- Excessive downtime isn't easy to swallow** **35**
Scott Tacheny
- Tooling: A survey of what's available** **38**
- Back Page** **44**
