April 2019

Volume 17 Number 3

Coating is an important process in solid dosage pharmaceutical manufacturing for masking unpleasant tastes, adding color, or controlling a product's dissolution rate. This issue of *Tablets & Capsules* features a roundup of coaters and coating products as well as articles on how to make your tablet coating process more cost efficient and flexible and the ways in which film coatings are helping manufacturers adapt to today's pharma industry trends. We also discuss how several equipment and ingredient suppliers have teamed up to help manufacturers tackle clean-label requirements, compare the performance and stability of soft-gel plasticizers, and get an update on recent developments in dissolution testing.
