

TABLETS & CAPSULES

www.tabletsandcapsules.com

May 2019

Volume 17 Number 4

In this issue of *Tablets & Capsules*, industry experts discuss blockchain technology's potential role in helping to secure the pharmaceutical supply chain, a packaging equipment supplier provides a custom solution for a challenging bottling application, and a CDMO expands its packaging capacity to meet growing demand. Elsewhere in the issue, we learn how to identify and mitigate unwanted particle breakage in bulk handling processes, preview the Controlled Release Society's annual meeting, and get an inside look at a popular industry training course. We also discuss containment strategies for highly potent APIs and compare calcium phosphate excipients. Finally, the CEO of Civica Rx explains how the company hopes its nonprofit business model will help eliminate shortages and control prices in the generic drug market.
