

TABLETS & CAPSULES

www.tabletsandcapsules.com

September 2019

Volume 17 Number 6

In this issue of *Tablets & Capsules*, we focus on tableting, with articles covering flashing during tablet compression, the advantages of instrumented R&D tablet presses, how blending practices can impact tablet hardness, and lubricants for direct-compression tableting. We also learn how a cannabis manufacturer improved product quality by upgrading tableting equipment. Elsewhere in the issue, we explore using liquid-filled hard-shell capsules to develop combination drug products, preview Pack Expo Las Vegas, and learn how proposed EU microplastics legislation may impact the pharmaceutical industry.

TABLETING

Flashing during tablet compression	10
	<i>Mike Beyl</i>
Issue focus: Tableting	16
Advantages of using an instrumented R&D tablet press	20
	<i>Robert Sedlock</i>
Cannabis manufacturer upgrades tableting equipment to improve product quality	24

LIQUID CAPSULE FILLING

Liquid capsule filling: A survey of what's available	27
Developing combination drug products using liquid-filled hard-shell capsules	30
	<i>Justin Kalafat</i>

ALSO IN THIS ISSUE
